

# TABLE OF CONTENTS

About the Author	ix
Preface	x
Author's Introduction	xiii

---

<b>Introduction</b>	<b>1</b>
---------------------	----------

---

<b>Chapter 1: Modeling Concepts</b>	<b>3</b>
1.1 Mathematical Modeling	3
1.2 Talkative Models	5
1.3 Parameter/Model Requirements	7
1.4 Modeling Procedure	8
1.5 Closure	13

---

<b>Part 1: Obstructive Sleep Apnea (OSA)</b>	<b>15</b>
--	-----------

---

<b>Chapter 2: Obstructive Sleep Apnea: Basic Principles and Current Treatments</b>	<b>17</b>
2.1 Obstructive Sleep Apnea (OSA)	17
2.2 Diagnosis	19
2.3 Clinical Management and Treatment of OSA	20
2.3.1 Oral Devices	20
2.3.2 Surgical Treatment	21
2.3.3 CPAP Therapy	22
2.4 Closure	25
References	25

---

<b>Chapter 3: Modeling of Continuous Positive Airway Pressure (CPAP)</b>	<b>29</b>
3.1 Principles of Operation and System Components	29
3.2 Lumped Parameter Modeling of Components	30
3.2.1 Air Delivery Unit	31
3.2.2 Connecting Duct	31
3.2.3 Reservoir	32
3.2.4 Delivery Tube	33
3.2.5 Mask	37
3.3 Simulink™ Model	39
3.4 Model Validation	41
3.5 Model Utility	44
3.5.1 Compressor Analysis	45
3.5.2 System Model Summary	47
3.5.3 Simulation Results	49
3.6 Reversed Flow	54
3.6.1 Transport Delay	56
3.6.2 Effect of Flow Direction on Air Properties	56
3.6.3 Exhaled Air Re-breathing	57
3.6.4 Modeling Outcomes	59
3.7 Closure	63
References	63

---

<b>Chapter 4: Modeling CPAP Humidification</b>	<b>65</b>
4.1 The Need for Humidification	65
4.2 Types of Humidifiers	66
4.2.1 Heated Humidifiers	67
4.2.2 Passive Humidifiers	69
4.2.3 Hygroscopic Condenser Humidifiers	69
4.3 Modeling with Humidification	71
4.4 Air Delivery Unit	72
4.5 Humidification Process	74
4.6 Mass Transfer	76
4.7 Humidifier Heat Transfer	79
4.7.1 Heater Plate	79
4.7.2 Water Reservoir	82
4.7.3 Air Chamber	86

4.8	Heated Air Delivery Tube (HADT)	89
4.9	Interface	93
4.9.1	Flexible Tube	94
4.9.2	Nasal Mask	95
4.10	Simulink™ Model	99
4.11	Closure	100
	References	100

---

<b>Chapter 5:</b>	<b>Control Systems for CPAP</b>	<b>103</b>
5.1	Available Control Schemes	103
5.2	Mathematical Modeling	106
5.2.1	Physical System	106
5.2.2	Pressure Transducer	107
5.2.3	Controller	108
5.2.4	Breathing	108
5.3	Simulink™ Model	108
5.3.1	Model Components	108
5.3.2	Open Loop Response	109
5.4	Appropriate Control Scheme	111
5.4.1	Time Constant Compensation	112
5.4.2	Time Delay Compensation	114
5.5	Controller Tuning	116
5.5.1	Reaction Curve Method	117
5.5.2	Continuous Cycling Method	117
5.6	Flow Sensors	119
5.7	Closure	122
	References	123

---

<b>Chapter 6:</b>	<b>Mask Design</b>	<b>125</b>
6.1	Basic Principles of Condensation and Carbon Dioxide	125
6.2	Mathematical Models to Determine Design Parameters	128
6.2.1	Fluid Modeling	128
6.2.2	Design Considerations of Pressure and Area Effects	131
6.3	Modeling Condensation	132
6.3.1	Condensation Physics	132
6.3.2	Calculation of condensation rate	133

6.4 Computational Fluid Dynamic (CFD) Simulations	137
6.5 Closure	139
References	139

---

<b>Part 2: Respiratory Distress Syndrome (RDS)</b>	<b>141</b>
--	------------

---

<b>Chapter 7: Basic Principles and Current Treatments</b>	<b>143</b>
---	------------

7.1 Respiratory Distress Syndrome (RDS)	143
7.1.1 Pathophysiology	144
7.1.2 Surfactant Therapies	145
7.1.3 Traditional Ventilation Therapies	145
7.2 Ventilation Techniques using Pressure Oscillations	147
7.2.1 High Frequency Ventilation (HFV)	147
7.2.2 Biologically Variable Ventilation (BVV)	150
7.2.3 Continuous Positive Airway Pressure (CPAP) with Pressure Oscillations	150
7.3 Closure	152
References	152

---

<b>Chapter 8: Modeling of Bubble CPAP</b>	<b>155</b>
---	------------

8.1 Principles of Operation and System Components	155
8.1.1 Humidification Chamber	156
8.1.2 Single-Heated Breathing Circuit	156
8.1.3 Pressure Manifold	157
8.1.4 CPAP Generator	157
8.1.5 Patient Interface - Nasal Tubing, Nasal Prongs, and Infant Bonnet	158
8.2 Lumped Parameter Modeling of Components	158
8.2.1 Humidification Chamber	159
8.2.2 The Inspiratory Line	160
8.2.3 Patient Interface	162
8.2.4 Expiratory Line	163
8.2.5 The CPAP Generator	166
8.2.6 Simplified Lung Model	166
8.2.7 Complete System Simulation Model	167

8.3 Model Validation	168
8.4 Model Utility	169
8.4.1 Effect of Design Parameters on Pressure Transmission	169
8.4.2 Interaction with Neonatal Lung	170
8.5 Closure	170
References	171

---

<b>Chapter 9: Modeling Device Interaction with the Neonatal Lung</b>	<b>173</b>
9.1 Respiratory System Structure and Function	173
9.1.1 Anatomy	173
9.1.2 Inspiration, Expiration, and the Respiratory Muscles	177
9.1.3 Respiratory Volumes and Capacities	179
9.2 Respiratory Mechanics	180
9.2.1 Airway Resistance	180
9.2.2 Compliance	181
9.2.3 Impedance	182
9.2.4 Alveolar Surface Tension	182
9.2.5 Work of Breath	185
9.3 Modeling Respiratory System Dynamics	186
9.3.1 Morphometric Models	186
9.3.2 Mechanical Models	187
9.3.3 Summary	189
9.4 Model Development	190
9.4.1 Model Assumptions	191
9.4.2 Model Derivation	194
9.4.3 Mass Flow Rate Expressions	195
9.4.4 Lobe Dynamics	196
9.4.5 The Pleural Compartment and Chest Wall	198
9.5 Simulink™ Model	200
9.6 Model Validation	204
9.7 Predictions of Pressure Oscillation Transmission Through the Tracheobronchial Tree	207
9.8 Closure	209
References	209

---

<b>Appendix A: CPAP Air Delivery</b>	<b>211</b>
A.1 Positive Type Air Compressors	211
A.2 Non-Positive Type Air Compressors	211
References	214

---

<b>Appendix B: Sensors Used in CPAP</b>	<b>215</b>
B.1 Digital Propeller Anemometer	215
B.2 Electromagnetic Flow Meter	216
B.3 Laser Doppler Anemometry (LDA)	216
B.4 Hot Wire/Film Anemometer	217
B.5 Ultrasonic Anemometer	219
B.6 Summary	219
References	221
