CONTENTS

Preface xviii

CHAPTER 1 Introduction 1
1.1 Model of a Valve Closure and Fluid Transient 1
1.2 Pipe Stresses 2
1.2.1 Static Stresses 2
1.2.2 Dynamic Stresses 2
1.3 Failure Theories 3
1.4 Valve Closure Model Summary 3

CHAPTER 2 Steady-State Fluid Mechanics and Pipe System Components 5
2.1 Conservation of Mass and Bernoulli’s Equation 5
2.1.1 Conservation of Mass 5
2.1.2 Bernoulli’s Equation 6
2.1.3 Limitations of Bernoulli’s Equation Due to Localized Flow Characteristics 7
2.2 Hydraulic and Energy Grade Lines 11
2.3 Friction Losses for Pipes 11
2.3.1 Types of Fluids 13
2.3.1.1 Viscosity Definition 13
2.3.1.2 Properties of Newtonian and Non-Newtonian Fluids 14
2.3.2 Laminar Flow in Newtonian and Non-Newtonian Fluids 15
2.3.3 Friction Factors from the Moody Diagram 16
2.3.3.1 Surface Roughness 19
2.3.3.2 Pipe and Tubing Dimensions 19
2.3.3.3 Density and Viscosity Data and Their Effects on Pressure Drops Due to Flow 23
2.3.4 Tabulated Pressure Drops for Water Flow in Steel Pipe 26
2.3.5 Effects of Aging on Water-Filled Steel Pipes 26

2.3.6 Friction Factors from Churchill’s Equation 28
2.3.7 Pipe Friction Losses for Bingham Plastic Fluids and Power Law Fluids 34
2.3.8 Flow and Friction Losses in Series Pipes 38
2.3.9 Parallel Pipes 40
2.3.10 Inlets, Outlets, and Orifices 41
2.3.11 Fitting Construction 41
2.3.12 Valve Designs 43
2.3.13 Gate Valves 55
2.3.14 Globe Valves 55
2.3.15 Ball Valves 55
2.3.16 Butterfly Valves 56
2.3.17 Plug Valves 56
2.3.18 Diaphragm Valves 56
2.3.19 Relief Valves 62
2.3.20 Safety Valves 62
2.3.21 Needle Valves 67
2.3.22 Pinch Valves 67
2.3.23 Traps 67
2.3.24 Pressure Regulators 68
2.3.25 Friction Losses for Fittings and Open Valves 68
2.3.26 Graphic Method for Friction Losses in Fittings and Valves 69
2.3.27 Crane’s Method for Friction Losses in Steel Fittings and Valves 69
2.3.28 Modified Crane’s Method for Friction Losses in Fittings and Valves of Other Materials and Pipe Diameters 69
2.3.29 Darby’s Method for Friction Losses in Fittings and Valves for Newtonian and Non-Newtonian Fluids 69
2.3.30 Tabulated Resistance Coefficients for Fittings and Valves Using Crane’s, Darby’s, and Hooper’s Methods 74
2.3.31 Valve Performance and Friction Losses for Throttled Valves 74

### Chapter 3.3.7 - Restraint and Control of Forces

- 3.3.7.1 Reactions and Pipe Stresses
- 3.3.7.2 Torsional Stresses and Moments
- 3.3.7.3 Stress Intensification Factors
- 3.3.7.4 Flexibility Calculation Example
- 3.3.7.5 Pipe Stresses Due to Pipe and Fluid Weights
- 3.3.7.6 Pipe Stresses Due to Pipe and Fluid Weights
- 3.3.7.7 Comparison of Code Stress Calculations
- 3.3.7.8 Comparison of Code Stress Calculations
- 3.3.7.9 Pipe Stresses Due to Wind and Earthquake
- 3.3.7.10 Pipe Supports and Anchor Designs
- 3.3.8 Structural Requirements for Fittings, Flanges, and Valves
- 3.3.9 Pipe Schedule and Pressure Ratings for Fittings, Flanges, and Valves
- 3.3.10 Flange Stresses
- 3.3.11 Limiting Stresses for Rotary Pump Nozzles

### Summary of Piping Design

- Limit Load Analysis for Bending
- Limit Load Analysis for Equations for Bending of a Pipe
- Comparison of Limit Load Analysis to Cyclic Plasticity
- Plastic Deformation Due to Pressure, Hoop Stress
- Autofrettage
- Combined Stresses for Plasticity
- Comparison of Limit Load Analysis to the Bree Diagram
- Summary of Plastic Failure Analysis
- Fatigue Failure
- High-Cycle Fatigue Mechanism
- High-Cycle Fatigue Life of Materials
- Triaxial Fatigue Theories
- Maximum Normal Stress Theory, Triaxial Stresses
- Maximum Shear Stress Theory, Triaxial Stresses
- Octahedral Shear Stress Theory, Triaxial Stresses
- Cumulative Damage
- Rain Flow Counting Technique
- Use of Fatigue Theory and Equations
- Pressure Vessel Code, Fatigue Calculations
- Method 1: Elastic Stress Method for Fatigue
- Method 2: Elastic-Plastic Stress Method for Fatigue
- Method 3: Structural Stress Method for Fatigue
- Fatigue Summary
- Fracture Mechanics
- Fracture Mechanics History
- Applications of Fracture Mechanics and Fitness for Service
- LEFM
- Elastic-Plastic Analysis
- Elastic-Plastic Fracture Mechanisms
- Crack Propagation
- Stress Raisers
- Fracture Mechanics Summary
- Corrosion, Erosion, and Stress
- Corrosion Cracking
- Flow-Assisted Corrosion (FAC)
- Leak Before Break
- Thermal Fatigue
- Creep
- Examples of Creep-Induced Failures
- Creep in Plastic and Rubber Materials

### Chapter 4 - Pipe Failure Analysis and Damage Mechanisms

- 4.1 Failure Theories
- 4.1.1 State of Stress at a Point, Multiaxial Stresses
- 4.1.2 Maximum Stresses
- 4.1.2.1 Principal Stresses
- 4.1.2.2 Maximum Shear Stresses
- 4.1.3 Stresses Due to Pipe Restraint
- 4.1.4 Failure Stresses
- 4.1.5 Comparison of Failure Stress Theories
- 4.1.6 Maximum Normal Stress Theory (Rankine)
- 4.1.7 Maximum Shear Stress Theory (Tresca, Guest)
- 4.1.8 Distortion Energy/Octahedral Shear Stress Theory (Von Mises, Huber, Henckey)
- 4.2 Structural Damage Mechanisms/Failure Criteria
- 4.3 Overload Failure or Rupture
- 4.3.1 Burst Pressure for a Pipe
- 4.3.2 External Pressure Stresses
- 4.4 Plastic Deformation
- 4.4.1 Plasticity Models for Tension
- 4.4.2 Cyclic Plasticity
- 4.4.3 Elastic Follow-Up
- 4.4.4 Cyclic, Plastic Deformation
- 4.4.5 Plastic Cycling for Piping Design

6.2 Water Hammer Mechanisms in Steam/Condensate Systems 291
6.2.1 Water Cannon 292
6.2.2 Steam and Water Counterflow 292
6.2.3 Condensate-Induced Water Hammer in a Horizontal Pipe 292
6.2.4 Steam Pocket Collapse and Filling of Voided Lines 293
6.2.5 Low-Pressure Discharge and Column Separation 295
6.2.6 Steam-Propelled Water Slug 295
6.2.7 Sudden Valve Closure and Pump Operations 295
6.3 Blowdown 295
6.3.1 Sonic Velocity at Discharge Nozzles 296
6.3.2 Piping Loads During Blowdown 297
6.3.3 Steam/Water Flow 298
6.3.4 Pressures in Closed Vessels and Thrust During Blowdown 298
6.4 Appropriate Operation of Steam Systems for Personnel Safety 300
6.4.1 System Startup 300
6.4.2 Steam Traps 301
6.5 Summary of Fluid Transients 301

CHAPTER 7 Shock Waves, Vibrations, and Dynamic Stresses in Elastic Solids 303
7.1 Strain Waves and Vibrations 303
7.1.1 One-Dimensional Strain Waves in a Rod 303
7.1.2 Three-Dimensional Strain Waves in a Solid 304
7.1.3 Vibration Terms 304
7.1.4 Vibrations in a Rod Due to Strain Waves 305
7.1.5 Dilatational Strain Waves in a Rod 305
7.1.6 Wave Reflections in a Rod 305
7.1.7 Strain Wave Examples for Rods 306
7.1.8 Inelastic Damage Due to Wave Reflections 308
7.2 Single Degree of Freedom Models 308
7.2.1 SDOF Oscillators 308
7.2.1.1 Homogeneous Solution to the Equation of Motion for a Step Response 311
7.2.1.2 Particular Solution to the Equation of Motion for a Step Response 311
7.2.1.3 General Solution to the Equation of Motion for a Step Response 312
7.2.2 Step Response for a SDOF Oscillator 312
7.2.2.1 Homogeneous Solution to the Equation of Motion for a Step Response 311
7.2.2.2 Particular Solution to the Equation of Motion for a Step Response 311
7.2.2.3 General Solution to the Equation of Motion for a Step Response 312
7.2.3 Impulse Response for a SDOF Oscillator 312
7.2.3.1 Homogeneous Solution to the Equation of Motion for a Step Response 311
7.2.3.2 Particular Solution to the Equation of Motion for a Step Response 311
7.2.3.3 General Solution to the Equation of Motion for a Step Response 312
7.2.4 Ramp Response for a SDOF Oscillator 313
7.2.5.1 SDOF Harmonic Response 313

8.4.1.7  Breathing-Mode Frequency 345
8.4.1.8  Flexural Resonance Assuming Fixed Pipe Ends 345
8.4.1.9  Flexural Resonance Assuming Fixed Pipe Ends 345
8.4.2  Flexural Resonance Examples 345
8.4.2.1  Strains in Gun Tubes 345
8.4.2.2  Strains Due to Internal Shocks in a Tube 346
8.4.3  Summary of Flexural Resonance Theory 348
8.5  Dynamic Hoop Stresses 348
8.5.1  Bounded Hoop Stresses from Beam Equations 348
8.5.1.1  Precursor and Aftershock Vibrations 350
8.5.1.2  Pipe Wall Displacement Derivation 350
8.5.1.3  Pipe Wall Displacement Equation 350
8.5.1.4  Critical Velocity 351
8.5.1.5  DMF and Maximum Stresses from Beam Theory 351
8.5.2  Dynamic Stress Theory 351
8.5.2.1  Derivation of Dynamic Stress Equations 351
8.5.2.2  Static Stress 352
8.5.2.3  Equation of Motion for a SDOF Oscillator 352
8.5.2.4  Equation of Motion for a Cylinder Subjected to a Sudden Internal Pressure 352
8.5.2.5  Pipe Stresses Due to a Shock Wave 353
8.5.2.6  Precursor Stresses 353
8.5.2.7  Effects of the Arbitrary Selection of \( t = 0 \) 354
8.5.2.8  Effects of the Wave Speed 354
8.5.2.9  Maximum Damped Precursor Stress 354
8.5.2.10  Aftershock-Free-Vibration Stresses 354
8.5.2.11  Damping 355
8.5.2.12  Maximum Stress When the Critical Velocity is Not Considered 355
8.5.3  Comparison of Theory to Experimental Results for a Gas-Filled Tube 355
8.5.4  Comparison of Theory to Experimental Results for a Liquid-Filled Pipe 356
8.5.4.1  Test Setup and Raw Data 358
8.5.4.2  Test Results and Discussion 359
8.5.4.3  Breathing Stress Frequency 363
8.5.4.4  Wave Velocities 363
8.5.4.5  Pressure Surge Magnitude 363
8.5.4.6  Equivalent Axial and Hoop Strains 365
8.5.4.7  Example of Corrective Actions and Fitness for Service 365
8.5.4.8  Corrective Actions 365
8.5.4.9  Fitness for Service 365
8.5.4.10  Comparison of Flexural Resonance Theory to Dynamic Stress Theory 367
8.5.4.11  Valves and Fittings 369
8.5.4.12  Pressure Vessels 369
8.5.4.13  Plastic Hoop Stresses 370
8.5.4.14  FEA Results for a Shock Wave in a Short Pipe 370
8.5.4.15  Explosions in Pipes 371
8.5.4.16  Summary of Elastic and Plastic Hoop Stress Responses to Step Pressure Transients 373

**CHAPTER 9  Dynamic Stresses Due to Bending** 379

9.1  Deformations, Stresses, and Frequencies for Elastic Frames 379
9.1.1  Static Deflections and Reactions for Simply Supported Beams and Elastic Frames 379
9.1.2  Frequencies for Simple Beams 379
9.1.3  Frequencies for Elastic Frames 381
9.2  Elastic Stresses Due to Bending 383
9.2.1  Step Response Calculation for Bending 384
9.2.1.1  Calculation Assumptions 384
9.2.1.2  Axial Stresses 385
9.2.1.3  Bending Stresses 386
